

A B S T R A C T

A fluid dispenser characterized in that it comprises:

- 5 a gas reservoir (12) defining an actuating wall (120) for causing the volume of the reservoir to vary, and thereby driving the gas out of said reservoir;
- at least one fluid reservoir (13) defining an actuating wall (130) for causing the volume of the
- 10 reservoir to vary and thereby driving the fluid out of said reservoir;
- at least one outlet orifice (141) common to the gas reservoir (12) and to a fluid reservoir (13);
- a gas feed duct (15) which connects the gas
- 15 reservoir (12) to the common outlet orifice (141); and
- at least one fluid feed channel (16) which connects a fluid reservoir (13) to the common outlet orifice (141).
